

CABLE PROTECTION DUCTS

Over 85 of electro-installation and stowage material production

The beginning of electrotechnic production of KOPOS KOLÍN goes back to the year 1926. Even before the WWII the company reached monopolistic status among keen competition on domestic market. After war the assortment changed slightly to match political needs.

Starting from 1994, new management of the company started with intense investments and development program. To ensure enough of quality raw material, the company has built its own PVC mixture production facility. The peak of the modernization process with regards to the quick growth of the company and its high logistics demands occurred in the year of 2005 and in 2009 there were opened two new storage and administrative production halls.

Within the innovation processes the company progressively introduces a new way of producing the technical documentation and a lot of modern technologies. A lot of new products were introduced, e.g. series of electroinstallation laths, double-coated corrugated pipes, double-coated parapet culverts, lead-free products or wide range of halogen-free products. There are 7000 kinds of products up today in the assortment of KOPOS KOLÍN.

The company's number one production priority is the quality of products. New products are always adjusted to match the EU standard requirements and all the assortment is traditionally tested according requirements of harmonized electrotechnic standards.

KOPOS KOLÍN a.s. is a holder of the certificate ISO 9001 and ISO 14001 as well as the Safe company and the Czech quality certificates. The company provides 100% guarantee on keeping the process stability, and consequently on the quality and safety of the products.

The company is always ready to match increased needs of the market and this helps to keep its permanent leading position. It can be considered a significant success that in the recent years KOPOS KOLÍN a.s. opened up 12 daughter sales companies mainly in Easter Europe, Central America but also and in Asia and it evolved from a domestic supplier to a company with a share in the world's market.

**The most important man in KOPOS KOLÍN is always the customer.
THANK YOU FOR YOUR PARTNERSHIP**

Corrugated double-wall cable ducts KOPOFLEX® and KOPODUR®

The duct system KOPOFLEX® and KOPODUR® offers a wide range of applicability. It is particularly suitable for the mechanical protection of all kinds of power and telecommunication cables.

Benefits of double-wall cable ducts compared to other duct types:

Benefits of the materials used:

- polyethylene, the material of the ducts, offers high resistance to aggressive substances
- possible use in the chemical industry
- halogen-free material
- suitable for the protection of water pipes
- different colours
- possible design with high UV stability
- the zero content of asbestos protects human health

Benefits of the unique method of production of double-wall ducts:

- the double wall and the corrugated shape provide high resistance under compression

- possible change of description on the pipe

- easy handling with the ducts when loading and re-loading

KOPOFLEX® - high flexibility

KOPODUR® - high rigidity

Installation benefits:

- can be installed directly in the soil, with no need of a sand bed

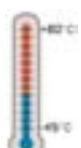

- possible installation directly in concrete
- a slip-over coupling seals the duct joint on IP 40

- sealing rings fitted on both ends of the duct protect the joint against humidity and temporary flooding with water (IP 67)

- well-arranged installation in multiple layers and rows thanks to distance spaces

- broad temperature range for application
- when installing, it is advisable to use at least 1 empty extra pipe in case that additional cables are needed in future

I c o n s - c a p t u r e

KOPOFLEX®

- flexible doublecoat corrugated pipe

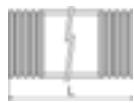

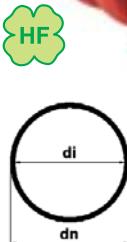

MAT				
HDPE	storage: -45- +60°C	A1	450 N/20 cm	IP40
assembly: -5 - +60°C				

Halogen-free flexible double-coated pipe designed for mechanical protection of all kinds of power and data wiring.
The pipes are made in compliance with ČSN EN 61386-24.

The pipe is available in form of a bar, the coupling is put on one end of it.

When using a sealing ring, the protection class is IP 67.

In case of mechanical compaction of layers above the protector, take care not to exceed the value of the load capacity of the protector.

Accessories for corrugated pipes KOPOFLEX® and KOPODUR®

Couplings - slip-over couplings are the same for both types of pipes and are used to join the pipes.

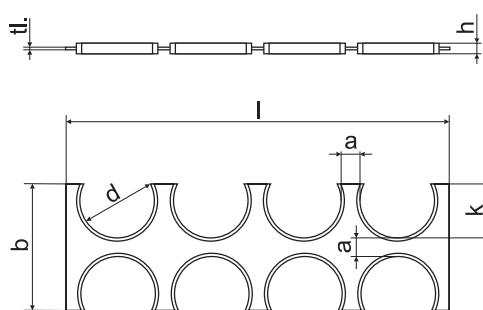

Sealing rings - the same for both types of pipes and are used to seal the joint to prevent it against humidity and water.

Closing plugs - for blinding of backup lines and for temporary blinding of pipes when installing.

Distance spacers - for position fixation of several pipes in one excavation.

Distance spacers are for fixation 8 pipes and spacer can be split for fixation 2, 4 and 6 pipes. Per order only.

HDPE communication cable ducts

Single-wall protection ducts for fibre-optic and metallic cables.

As requested by the customer:

Colour strips facilitate cable identification when several protection ducts are installed in a single excavation.

The shape of longitudinal grooves ensures easier air-blown installation of cables.

The ducts can be also supplied with the inner surface treated with a special type of oil. This treatment provides another advantage for easier cable installation.

The ducts can be provided with text (including length indications).

The ducts are supplied in harnesses 100 m or 300 m long. To create a line, it is possible to connect the individual harnesses with couplings.

For larger line sections, a 1750 m package is also available (for the dimension 06050 - 1250 m), supplied on wooden drums.

KOPOS KOLÍN a.s. supplies fibre-optic cable ducts even in large harnesses of 2000 m (06040) and 1250 m (06050) for installation on unwinding metal drums.

When the drum side plate is removed, the coil is slid onto the drum, the side plate is replaced and the drum is ready for unwinding.

The advantage of this solution consists in cost savings thanks to the transport of a larger quantity of wooden drums.

The air-blown installation technology allows the installation of fibre-optic cables with an outer diameter of 6,5 to 32 mm in suitable protective pipes of polyethylene by means of a large air mass. Thanks to the generated laminar air flow in the duct and the additional mechanical cable drift inside the duct, the fibre-optic cable is carried and moved forward. With a good technological procedure, it is possible to air-blow very long fibre-optic cables in ducts, even exceeding 2000 m. A huge advantage of this method is a very careful installation of the cables - without any pulling force. KOPOS KOLÍN a.s. does not install the ducts; please contact a provider of such services who possesses the necessary technology for duct installation and air-blowing of cables.

HDPE optical cable protectors

MAT				
HDPE	-5 - +50°C	A1	F	750 N/20 cm

Single-coated pipes designed to protect optical cables.

Cable protectors there is possible to deliver with inner wall to be lubricated by mineral oil. For larger volumes different color versions (beyond presented versions), labeling, number of differential stripes, denticular inner surface or inner diameter size (material thickness) can be ordered based on customer needs and specifications.

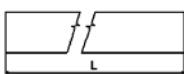

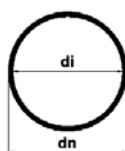

Shock resistance: N (normal, ČSN EN 61386-24)

Bend resistance: flexible

The protectors are tested under pressure of 1,5 MPa for the time of 1 hour.

The packaging on wooden drums and pallets for unwinding drums is delivered just upon previous order according to the customers's specification.

KOPOHALF®**- divided cable duct**

MAT		storage: -45- +75°C		A1		06110/2 - 450 N/20 cm		IP30
HDPE		assembly: -5 - +75°C				06160/2 - 750 N/20 cm		

A system of divided cable ducts is suitable mainly for a protection of underground cable laying and for a laying-out of the energy and communication lines.

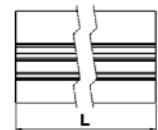

Another possible application is a protection of already installed underground cables.

The protectors consist of two identical parts.

When installing, the cables are put in the bottom part and then the top part is snapped to the bottom one.

The divided cable ducts are manufactured and tested in accordance with standard ČSN EN 61386-24.

Connecting of protectors is performed by overlapping joined lower parts with an upper part at length of approximately 30 cm.

KOPOKAN**- earthen channel**

MAT		storage: -25- +70°C		A1 - F		30 sec.		IP30
------------	--	---------------------	--	--------	--	---------	--	------

Earthen channels are intended for mechanical protection of installation of engineering networks to be loaded under ground.

By its technical parameters those fully replace the earlier used concrete channels.

There is possible to use them for additional protection already installed earthen engineering networks.

Floor trunkings are supplied with a colour lid.

Connected using connectors and folding the lid over, thus interconnecting the individual parts.

Strength limit on compression tested on length 300 mm.

Earthen channels are manufactured according to ČSN EN 61386-1 and ČSN EN 61386-24.

**Storage cable ducts**

UV-stable corrugated protection ducts KOPOFLEX® can be stored on open, hardened surfaces.

Other cable ducts (KOPOFLEX®, KOPODUR®, fibre-optic cable ducts HDPE, KOPOHALF® and KOPOKAN) can be stored on open, hardened surfaces, but have to be protected against the long-term effects of sunlight.

All duct accessories are to be stored in covered halls.

DOCUMENTS FOR DESIGNING PLASTIC CABLE DUCTS

Prepared by: Ing. Petr Lehký
Helena Kváčová

Head of Department: Ing. Petr Lehký

Director: Ing. Zdeněk Špaček, CDc.

INTRODUCTION

Maximum load value determined in the document for the projection of plastic cable ducts is based on "Dimensioning Cable Ducts" methodology that has been prepared for the sphere of power engineering.

Following tables specify the total load values for individual types of surface loading, including the influence of dynamic effects and the load resulting from the soil weight.

The cases of exceeding the permissible load (for the assortment of cable ducts offered) are printed in bold and shaded.

The load capacity of cable ducts has been determined with regard to max. 5% deformation. Cable ducts passing through a track bed may not be deformed by more than 3%. It implies that the load may not exceed the value of permissible stress at the deformation of 3 %.

The permissible load on cable ducts has been determined based on their ring stiffness set in accordance with ČSN EN ISO 9969.

Flexible corrugated double-wall cable duct KOPOFLEX®
KF 09040

Ring stiffness in accordance with ČSN EN ISO 9969: S = 20,9 kPa

Permissible load at the deformation of 3%: Q = 187,0 kPa

Permissible load at the deformation of 5%: Q = 311,7 kPa
